PROFESSIONAL SUMMARY

Full Stack MERN Developer (React.js, Node.js, Express.js, MongoDB) with hands-on experience from a 6-month internship and two full-stack projects: a multi-module ERP application and a real-time chat and video-calling platform. Skilled in building responsive React.js user interfaces, RESTful APIs, JWT authentication, role-based access control (RBAC) and real-time features with Socket.IO (WebSockets) and WebRTC. Strong in JavaScript (ES6+), TypeScript, MongoDB schema design and reusable component-based architecture, with a focus on clean, maintainable code.

TECHNICAL SKILLS

Frontend: React.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, React Hooks, React Router, Redux Toolkit, Material UI (MUI), Bootstrap, Vite, Axios, Formik, Yup

Backend & APIs: Node.js, Express.js, RESTful APIs, Swagger / OpenAPI, Multer, Nodemailer

Real-Time: Socket.IO, WebSockets

Database: MongoDB, MySQL

Tools & Technologies: Git, GitHub, Postman, VS Code, npm

PROFESSIONAL EXPERIENCE

Virtual Height

March 2026 – Present

MERN Stack Developer Intern (6-Month Internship) | Ahmedabad, India

- Contributed as a MERN Stack Developer Intern to a full-stack solar installation management ERP (lead capture through commissioning & handover), building features across the React.js front end, Express.js REST API and MongoDB database in a team-based workflow.
- Built responsive, reusable React.js components (forms, data tables, modals, filters) used across 40+ application screens, ensuring consistent layout, form behavior and user feedback from module to module.
- Developed RESTful API endpoints with Express.js and Mongoose for CRUD operations in modules such as leads, customers, inventory and vendors, and integrated them with React.js screens for creating, listing, filtering and updating records.
- Implemented JWT authentication and role-based access control (RBAC) using Express middleware, so each user role (admin, technician and others) could access only its permitted screens and API actions.
- Added server-side request validation through Express middleware and returned clear error responses, so invalid or incomplete data was rejected before reaching the database and users saw meaningful messages.
- Tested RESTful APIs with Postman and debugged front-end and back-end issues found during testing.
- Followed team coding standards: modular code organization, environment-based configuration, Git/GitHub version control.

PROJECTS

Bidirectional — Real-Time Chat & Video Calling Platform

Technologies: React.js, TypeScript, Node.js, Express.js, Socket.IO, WebRTC, MongoDB, JWT, Axios, Vite, Swagger

- Built a full-stack real-time chat application using React.js (custom Hooks), TypeScript, Node.js, Express.js, Socket.IO (WebSockets) and MongoDB, with 1:1 and group chat, typing indicators, read receipts, reactions, replies, forwarding, editing, deletion and GIF sharing.
- Implemented real-time voice/video calling with Socket.IO signaling and WebRTC, including screen sharing, device switching, busy-user detection and ICE candidate handling.
- Developed JWT authentication with refresh-token rotation, bcrypt password hashing, rate-limited authentication endpoints and OTP-based email verification (Nodemailer).
- Built a consent-based screen-sharing workflow with user approval and live WebRTC status updates.
- Designed MongoDB indexes and RESTful APIs with Swagger/OpenAPI documentation, along with image processing, upload validation and privacy-aware presence tracking.

Solar Installation Management System — Full-Stack ERP Application

Technologies: React.js, Node.js, Express.js, MongoDB, Mongoose, JWT, Bootstrap, Material UI, Formik, Yup, Joi, Multer, Nodemailer

- Developed a full-stack ERP web application for solar installation businesses using the MERN stack, covering lead management, site surveys, solar design, quotations, project approval, installation and commissioning.
- Implemented JWT authentication and role-based access control (RBAC) for admin, technician and other user roles using custom Express middleware.
- Developed RESTful APIs and reusable React.js components with CRUD operations, pagination, filtering, sorting and structured MongoDB (Mongoose) data models.
- Built modules for customer and lead management, products, projects, inventory, technicians, AMC scheduling, maintenance tickets, warranty claims and subsidy tracking.
- Built analytics dashboards and reports for financial, sales, inventory, technician and project data, with PDF and Excel export.
- Added client-side validation (Formik, Yup), server-side validation (Joi), Multer file uploads, automated email notifications (Nodemailer) and security practices including Helmet, CORS and bcrypt password hashing.

EDUCATION

Bachelor of Computer Applications (BCA) <i>Shree Adarsh BCA College, Botad, Gujarat</i>	Graduated: 2024
Higher Secondary (12th) <i>Akshar Purushottam High School, Gujarat</i>	Graduated: 2022
Secondary (10th) <i>Akshar Purushottam High School, Gujarat</i>	Graduated: 2020

CERTIFICATIONS

- MERN Stack Development Training, Virtual Height (August 2025 – March 2026)
- MERN Stack Developer Internship, Virtual Height (March 2026 – Present)
- React JS Course, Scaler Topics (April 2026)
- Node.js Certification Course – Master the Fundamentals, Scaler Topics (June 2026)
